Good First Half Performance, Significant Progress on Strategy

drax

Good performance	**Continuing to support UK energy security** • c.6% of UK power, 10% of UK renewables • First OCGT commissioned, operational and performing well – c.0.3GW capacity added to portfolio • Cruachan – turbine upgrade progressing, work continuing to resolve grid access restriction
Options for growth in generation, system support and data centres	**Addition of 0.7GW of BESS expected to deliver step change in Adj. EBITDA** **Now targeting increased Adj. EBITDA of £650-800m(1) in 2029** • Includes Pellet Production, Biomass Generation, Flexgen and 0.7GW of BESS developments • Currently excludes acquisition of Bluefield Solar Income Fund (BSIF), expected to become effective 31 July 2026 **Opportunities for further growth** • Proposed acquisition of BSIF • Assessing opportunities for further investment in flexible generation and renewables **Drax Power Station – utilisation of 4GW of grid connection capacity** • Developing options for data centres, system support and power generation
Capital allocation	**Maintain disciplined capital allocation policy** • Balance sheet strength supporting investment in growth and returns to shareholders

1) Excludes development expenditure and capital projects development.

Growing MW Under Management, Broadening The Portfolio

Scaling flexible, renewable portfolio with options for growth in energy security, energy transition and AI

2025: 4.0GW
(4 generation sites)

Biomass, pumped storage and hydro

Route to market agreements[1]

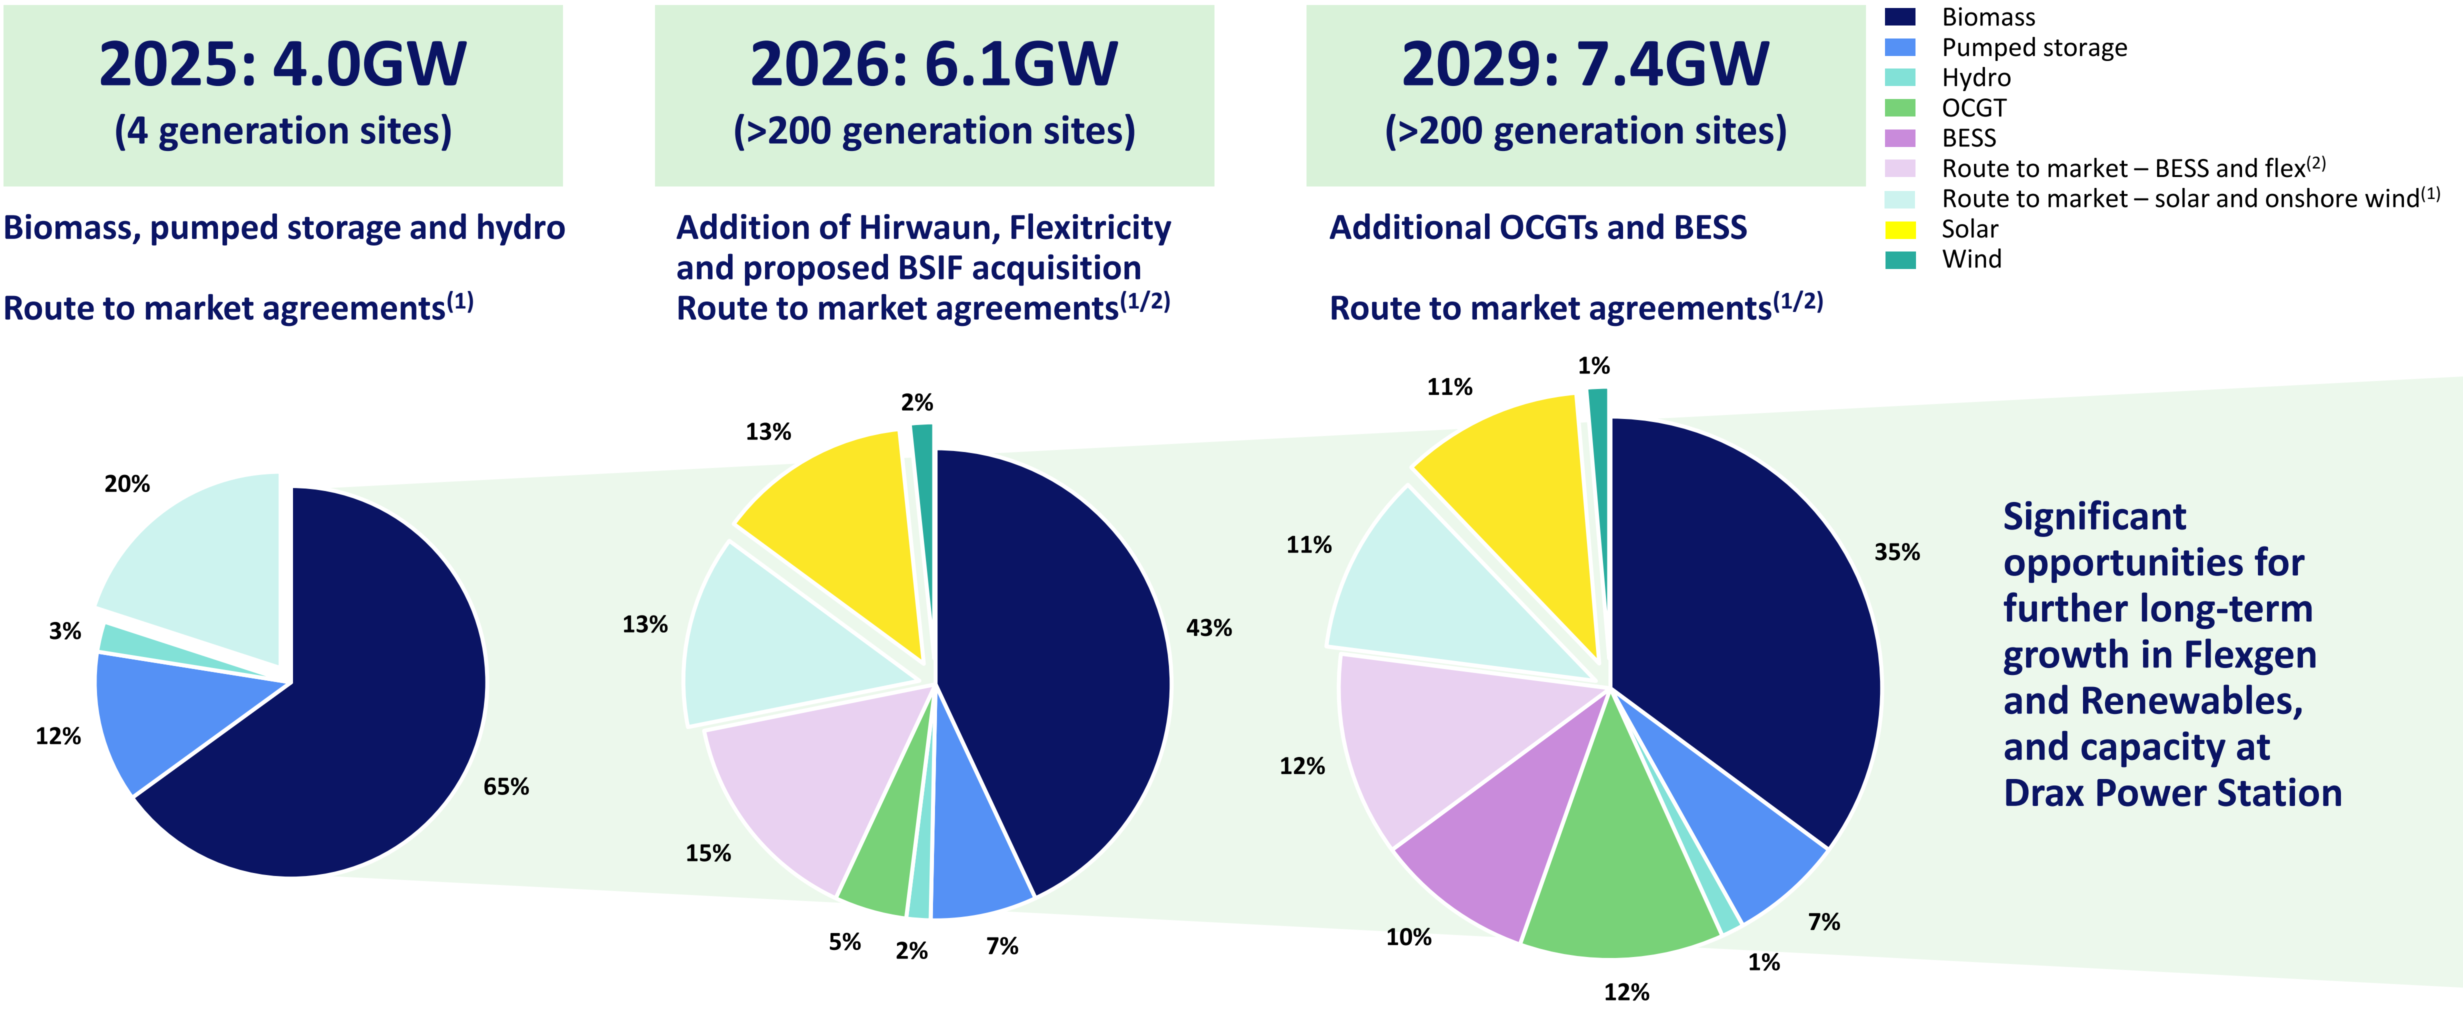
2026: 6.1GW
(>200 generation sites)

Addition of Hirwaun, Flexitricity and proposed BSIF acquisition
Route to market agreements[1/2]

2029: 7.4GW
(>200 generation sites)

Additional OCGTs and BESS

Route to market agreements[1/2]



Significant opportunities for further long-term growth in Flexgen and Renewables, and capacity at Drax Power Station

1) Drax Energy Solutions Ltd has established renewable PPA portfolio with c.0.8GW (>2,000 small generators), primarily solar and onshore wind.
2) Flexitricity has agreements for c.0.9GW route to market services, primarily for flexible generation assets.

Proposed Acquisition of BSIF

drax

Proposed acquisition of BSIF for 94.824p/share[(1)]

£561m Equity Value[(1)]

£521m Net Debt[(2)]

£1,082m Enterprise Value

- **£130m** EBITDA FY-25
- **£118m** Operating FCF[(3)] FY-25
- **£95m** Underlying Earnings FY-25
- **~0.9GW** Operational & UC[(4)]
- **2.9GW** Pipeline[(5)]

bluefield Solar Income Fund

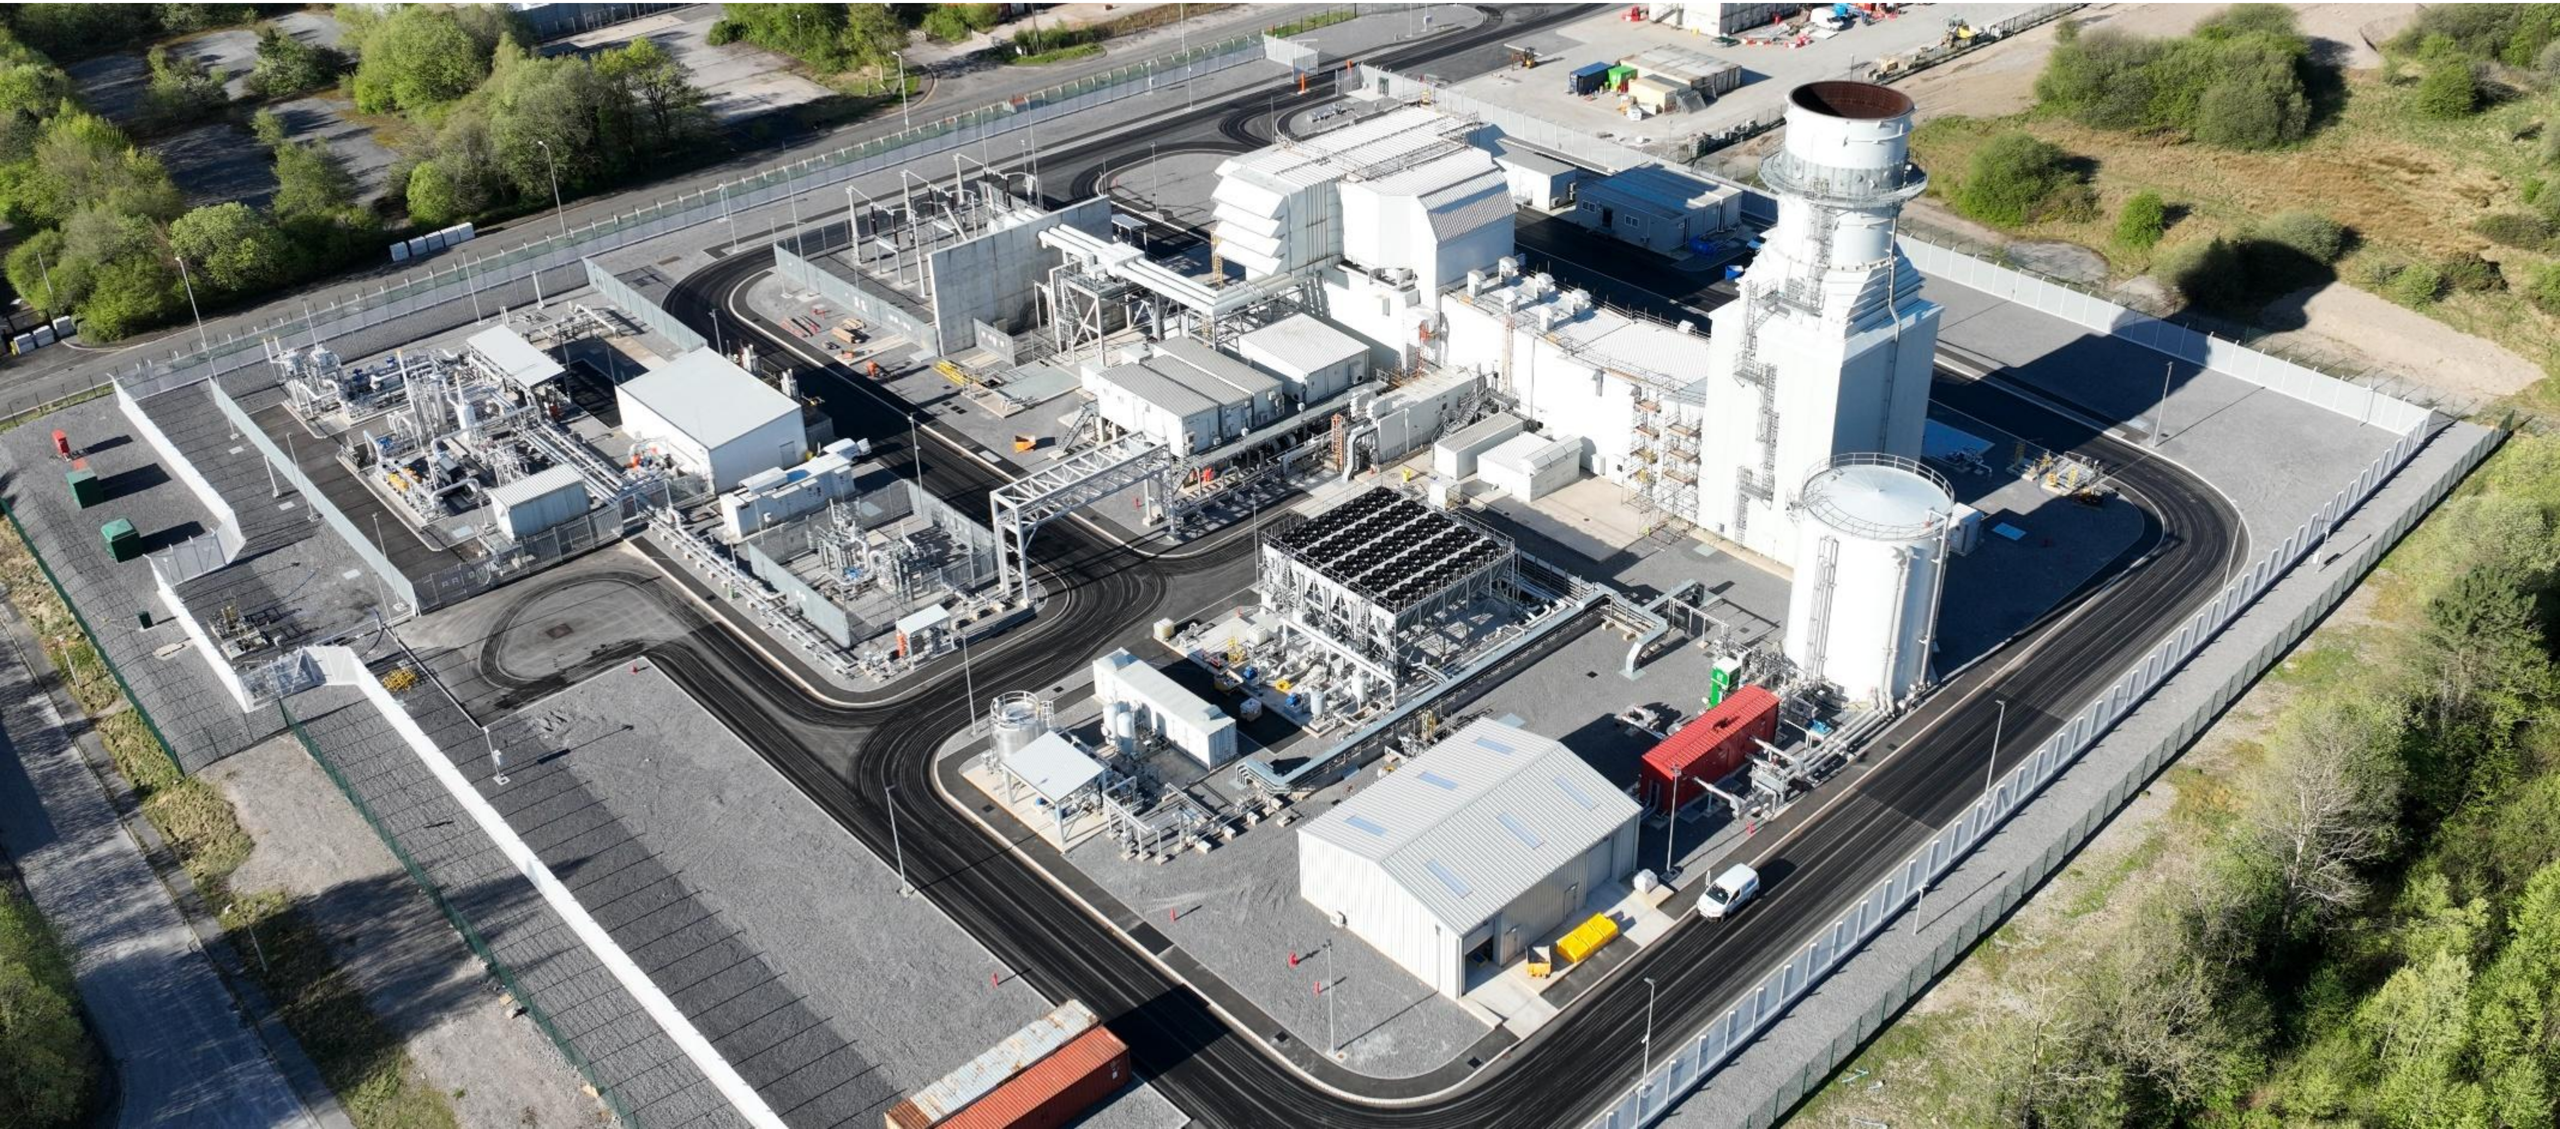
Timetable	
	○ **29 June 2026: Publication of Scheme Document** ○ **24 July 2026: Shareholder meetings – 99% vote in favour** ○ **31 July 2026: Court hearing to approve scheme, followed by completion** ○ **September 2026: Post-completion update on 2026**

1) Based on the total cash consideration of 92.574 pence per share and the second interim dividend of 2.25 pence per share.
2) Based on 31-Dec-25 historical net debt comprising £554m of total external debt, net of £0.05m Fund level cash and £33m of Immediate Holding Company cash.
3) "Operating free cash flow" is stated after deducting reported group corporation tax and Electricity Generator Levy.
4) "UC" defined as under construction.
5) Gross capacity.

Hirwaun Power – New 0.3GW Open Cycle Gas Turbine Power Station

drax

Fully commissioned, operational and performing well



Improved scoring in third-party accreditations, progress on climate, nature and people

MSCI AA (was A)[1]

Reflects strengthened practices and corporate governance, plus renewable opportunities

CDP A rating for climate and forestry

'A' ratings place Drax in the top 4% of companies who submit disclosures, demonstrating transparency and strong performance on climate and forestry

Developments

- SBTi targets to 2040 validated
- Launch of Biomass Tracker tool
- Drax Foundation Social Impact Report

Hirwaun Power – Fully Commissioned, Operational and Performing Well

Supporting security of supply and the energy transition

Strong first month of operations (June 2026)

High volatility in power markets and challenging weather

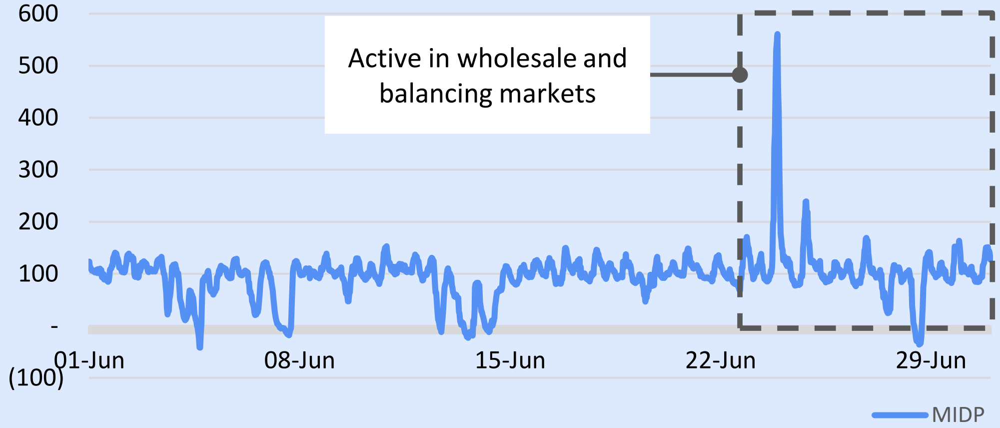
Opportunities for Hirwaun to provide additional services in wholesale, balancing and ancillary markets

- Higher continental prices – increased interconnector exports
- Lower wind speeds – increased demand for thermal
- Higher temperatures – lower thermal efficiency
- Ancillary services – utilised for c.440hrs (non-generation)

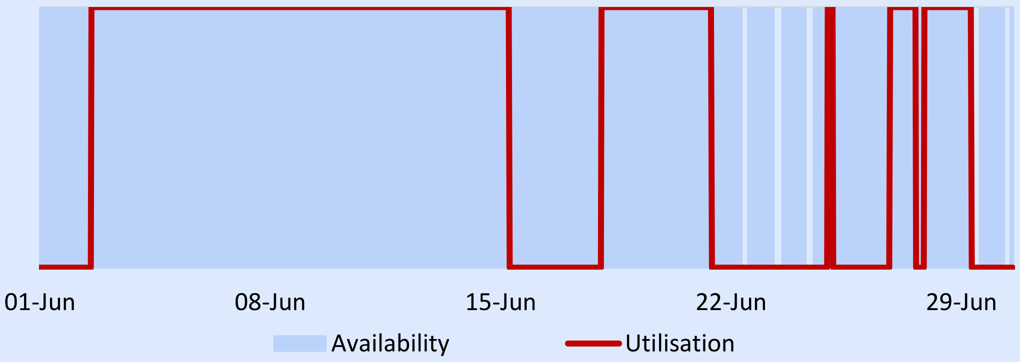
H1-26 revenue stack

- Capacity market agreements
- Wholesale peak power
- System support – balancing mechanism
- System support – ancillary services

Day-ahead and within-day: price volatility in the GB power market (£/MWh)



Operational for >440hrs in June 2026 providing non-generation ancillary services



Source: Drax

Balance Sheet – Facilities and Liquidity

drax

Strong balance sheet and liquidity

c.1.3x Net debt to Adj. EBITDA

Refinancing activities
- £450m Revolving Credit Facility (RCF) and €135m term-loan extended to 2029
- New £190m term-loan drawn, €70m term-loan facility repaid

Liquidity and working capital
- £0.6bn of cash and committed facilities
- £0.5bn Renewable Obligation Certificate (ROC) working capital unwind in 2027
- £1.1bn committed bridge facility signed for proposed BSIF acquisition(1)

Instrument	Maturity	Amount
BSIF bridge facility(1)	2027-2028	£1,083m (undrawn)
Term-loan facilities(2)	2027-2029	£632m
Infrastructure facilities(3)	2027-2030	£178m
RCF	2029	£450m (undrawn)
Euro bond	2029	€350m

Balance of maturities to 2030

1) c.£0.6bn with June 2028 maturity and c.£0.5bn with December 2027 maturity.
2) Term-loan maturities – £285m in 2027, £100m in 2028 and €185m and £80m in 2029.
3) Infrastructure maturities – £45m in 2027, £53m in 2028, £50m in 2029 and €32m in 2030.

Balance sheet strength recognised in rating agency updates post proposed acquisition of BSIF

S&P (BB+ stable outlook)

We regard as positive the diversification of Drax's portfolio as part of the group's continued shift away from subsidised biomass generation, as well as the additional highly contracted revenue.

Fitch (BB+ stable outlook)

Fitch considers quasi-regulated EBITDA to support higher debt capacity than merchant generation or supply. Accordingly, the acquisition of BSIF's existing portfolio of quasi-regulated assets will likely lead to an upward revision of Drax's debt capacity.[1]

DBRS (BBB (low) stable outlook)

We view the acquisition as modestly positive for Drax's business profile as the 0.9GW of acquired operational capacity will increase the Company's total operational asset base by more than 25%. The acquisition will also add diversification benefits because of the expanded and complementary fuel mix while slightly easing Drax's reliance on its primary asset, Drax Power Station.[2]

1) https://www.fitchratings.com/research/corporate-finance/draxs-bluefield-solar-deal-consistent-with-rating-reduces-headroom-19-06-2026
2) June 2026.

Capital Investment

Investment in core assets and strategy

	Key areas	H1-26 Actual £m	FY-26 Estimate £m
Growth	BESS, Pumped Storage and Hydro, and OCGTs	46	~100
Maintenance	Major planned outage on one biomass unit	29	~100
Other	Health, safety, environment and IT	10	~30
Total		**85**	**210-250**

2026 outlook

- Growth – BESS, Pumped Storage and Hydro upgrades, and OCGTs
- Maintenance – major planned biomass outage and US pellet operations

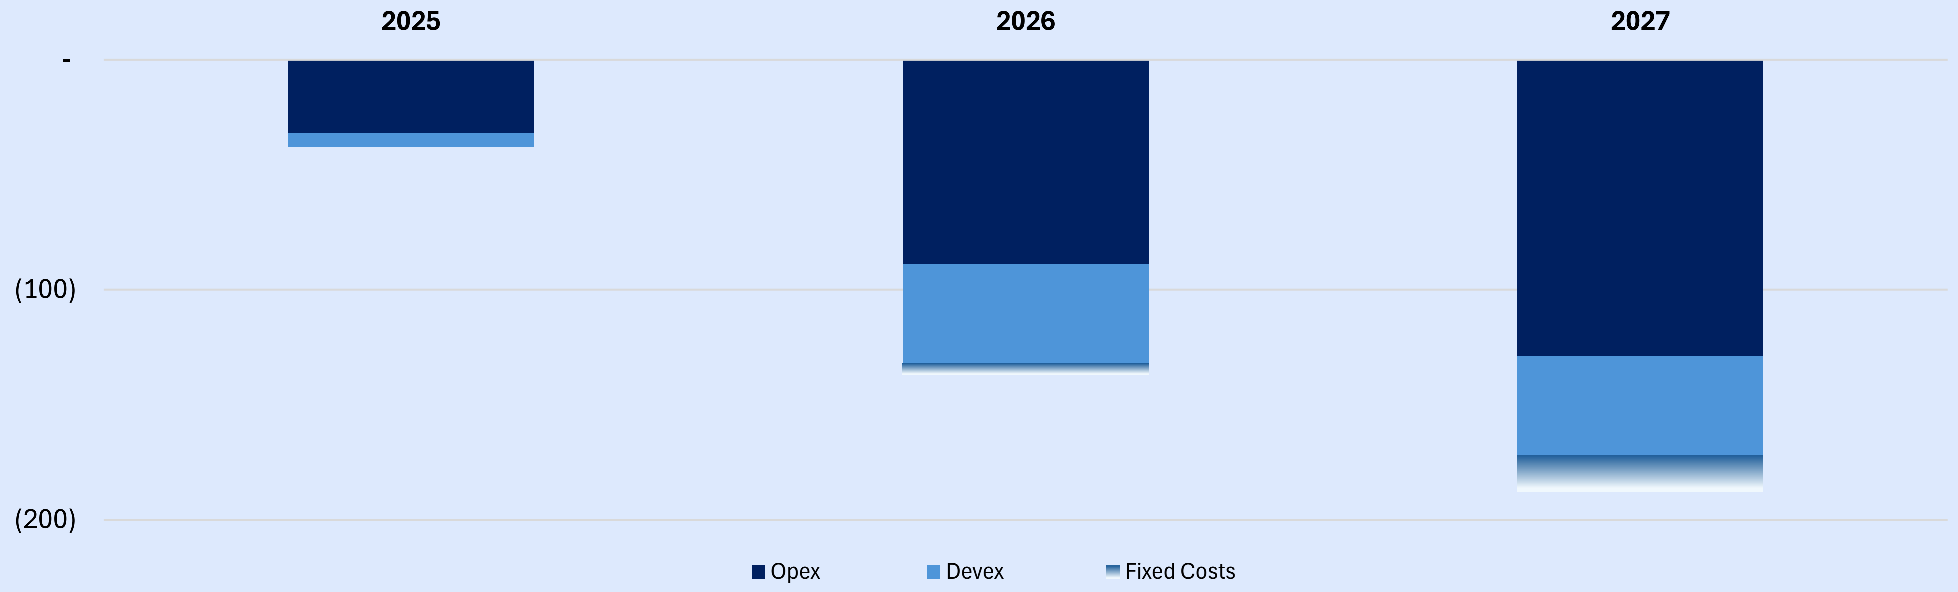
Additional investment in acquisitions

- Acquisition of Flexitricity completed March 2026 (net £36m)
- Proposed acquisition of BSIF for £561m (enterprise value of £1,082m)

Cost reductions delivering structural savings aligned with strategy for growth

Targeting annual structural savings of >£150m pa from 2027 vs 2024 base

Structural reductions[1] (£m pa) vs. 2024 base



Continue to invest in growth while driving cost savings and efficiency vs. 2024 base

- Ongoing Group-wide commitment to efficiency and cost reduction

1) Reductions shown in 2024 real terms, excluding Opus & Daldowie disposals, costs associated with growth for new OCGT assets and major outages.

Capital allocation policy remains unchanged

1. Maintain strong balance sheet
2. Invest in core business
3. Sustainable and growing dividend
4. Return surplus capital beyond investment requirements

drax

Create value by investing in the UK energy transition

Growth opportunities in flexible generation and renewables
Development of options for Drax Power Station

Growth in Demand for Power Supports Need for Renewables and Flexible Generation

NESO expects demand for power to double, requiring investment in new capacity and system support

BESS: Progress in H1-26 With Further Opportunities for Growth

drax

Significant progress made – 710MW of BESS developments added since October 2025

c.£500m of commitments to capital projects and tolling agreements
Targeting returns significantly in excess of WACC

Two complementary pillars for growth

1 Physical ownership

- Develop portfolio of Drax owned assets
- 260MW (520MWh), 3 sites in Scotland and England
- £157m capital investment
- Targeting operations in 2027 and 2028
- Developed by Apatura who bear development risk
- Options on additional c.0.3GW across 8 sites

2 Tolling

- Utilise agreements to provide additional power market access
- Minimal upfront cost
- 450MW (1.3GWh) (2-4 hr duration)
- 2 sites in Scotland and England
- 10 and 15-year tolling agreements – c.£300m commitment
- Targeting operations in 2028

ZENOBĒ

FIDRA ENERGY

Underpinned by trading, commercial and optimisation capability

Acquisition of Flexitricity
- Provides scalable trading and optimisation platform
- Existing route to market business of 0.9GW, primarily flexible generation
- Complements existing Drax route to market business for c.0.8GW of renewables

Flexitricity

Location and capacity	Status
Marfleet – 60MW (120MWh)	FID taken – operational in 2027
East Kilbride – 50MW (100MWh)	FID taken – operational in 2027
Neilston – 150MW (300MWh)	FID taken – operational in 2028
Zenobe – Coalburn – 200MW (800MWh)	FID taken – operational in 2028
Fidra – West Burton – 250MW (500MWh)	FID taken – operational in 2028

Further Growing a Balanced UK Portfolio, Adding Solar and Wind

drax

Flexible, renewable portfolio with options for growth in energy security, energy transition and AI growth

	2025	2026	2029
Drax Power Station Site	2.6GW	2.6GW	2.6GW
Pumped Storage and Hydro	0.6GW	0.6GW	0.6GW[1]
OCGT	-	0.3GW[2]	0.9GW[3]

Development of Options for a Data Centre at Drax Power Station

Characteristics to support AI data centre and energy security

Physical attributes

Large-scale reliable power supply

- 4GW[(1)] of grid connection capacity with 2.6GW[(1)] of active generation capacity to support 24/7 power
- >1,000 acre site
- Water extraction rights and cooling systems
- Secure operational site
- Proximity to UK fibre network
- Fully owned by Drax Group

Illustrative development schedule

Scalable front of and behind the meter solutions – short, medium, long-term potential

- Phase 1: c.100MW front of meter from late 2027
- Phase 2: c.500MW behind the meter 2028-2031 (subject to agreement with UK Government)
- Phase 3: additional capacity from 2031
- Backed up by 2.6GW[(1)] of active generation capacity

Other attributes

Expertise of Drax Group

- Established work force
- Experience in local planning and consenting

1) TEC – Transmission Entry Capacity.

Summary and outlook

Summary

drax

Good performance	**Continuing to support UK energy security** • c.6% of UK power, 10% of UK renewables • First OCGT commissioned, operational and performing well – c.0.3GW capacity added to portfolio • Cruachan – turbine upgrade progressing, work continuing to resolve grid access restriction
Options for growth in generation, system support and data centres	**Addition of 0.7GW of BESS expected to deliver step change in Adj. EBITDA** **Now targeting increased Adj. EBITDA of £650-800m(1) in 2029** • Includes Pellet Production, Biomass Generation, Flexgen and 0.7GW of BESS developments • Currently excludes acquisition of Bluefield Solar Income Fund (BSIF), expected to become effective 31 July 2026 **Opportunities for further growth** • Proposed acquisition of BSIF • Assessing opportunities for further investment in flexible generation and renewables **Drax Power Station – utilisation of 4GW of grid connection capacity** • Developing options for data centres, system support and power generation
Capital allocation	**Maintain disciplined capital allocation policy** • Balance sheet strength supporting investment in growth and returns to shareholders

1) Excludes development expenditure and capital projects development.

Growing MW Under Management, Broadening The Portfolio

Appendices

30 July 2026

Strong forward power sales through end of current renewable schemes

Contracted power sales (28 July 2026)	2026	2027	2028
Net RO, hydro and gas (TWh)[1]	11.5	2.1	0.2
Average achieved £ per MWh[2]	83.4	80.0	70.5
CfD (TWh)[3]	3.4	0.8	-

Forward power sales underpin earnings through Q1-27

- c.£1.1bn of forward power sales
- 13.8TWh at an average price of £82.7/MWh[1/2]
- RO generation – fully hedged in 2026 and to Mar-27

New low carbon dispatchable CfD scheme commences Q2-27

1) Includes de minimis structured power sales in 2026, 2027 and 2028 (forward gas sales as a proxy for forward power), transacted for the purpose of accessing additional liquidity for forward sales and highly correlated to forward power prices.
2) Presented net of cost of closing out gas positions at maturity and replacing with forward power sales.
3) CfD strike price, c.£142/MWh (Apr-25 to Mar-26) and c.£147/MWh (Apr-26 to Mar-27).

Continued progress on cost reduction

H1 2026

- Lower volume of pellets produced
  - Closure of Williams Lake
- Reduction in production costs
  - Cost management
  - Operational efficiencies

US Pellet Production

- Focused on own-use requirements of Biomass Generation
- Cost-plus transfer pricing basis
- Reduction in costs = reduction in revenues
- Overall impact is lower Pellet Production Adj. EBITDA, but increased Adj. EBITDA for Biomass Generation

Canadian Pellet Production

- Strong H1 performance
- Strategic review ongoing

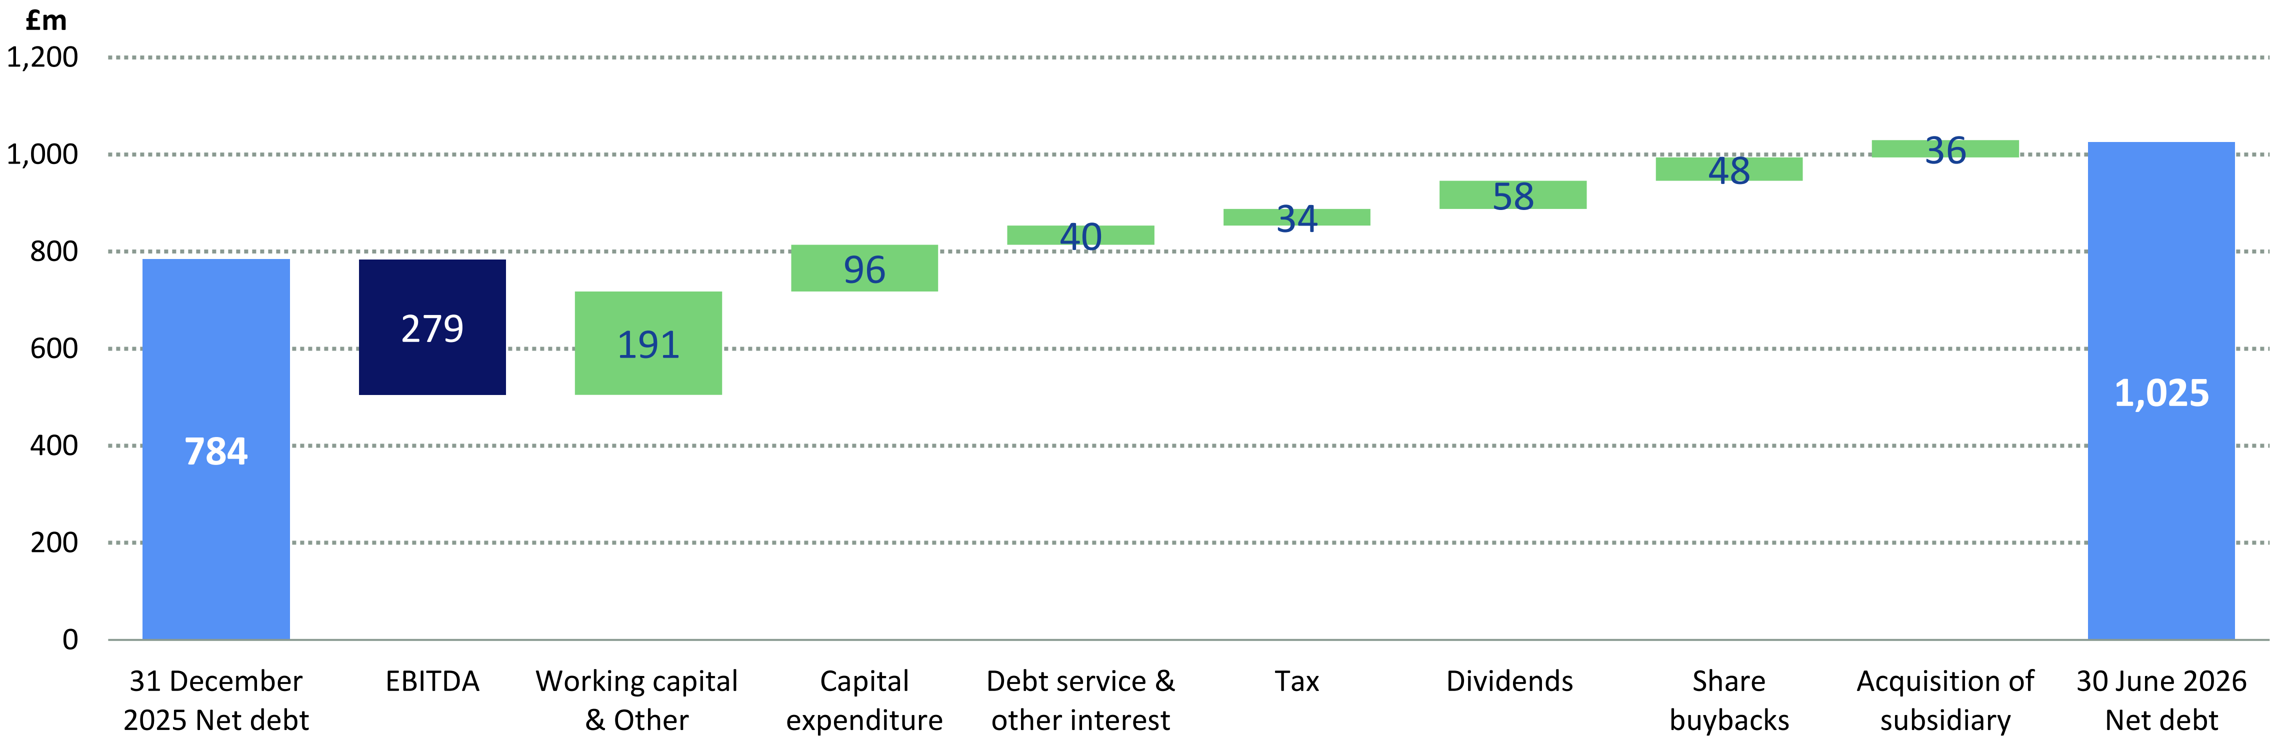
Group Net Debt

drax



Working Capital Inflow in 2027

c.£0.5bn benefit from end of Renewables Obligation (RO) scheme at Drax Power Station in 2027

RO

- Requirement for energy suppliers to source a proportion of their energy from a renewable source
- Renewables Obligation Certificates (ROCs) issued to generators
- ROCs bought by suppliers to show they have fulfilled the RO
- RO compliance period April-March
- The buy-out price of 1 ROC is
  - c.£67 (Apr-25 to Mar-26)
  - c.£69 (Apr-26 to Mar-27)

ROCs at Drax

- Drax generates c.10m ROCs per compliance period
- ROCs held on balance sheet until a sale is agreed – typically at the end of the RO compliance period in the following calendar year
- RO scheme ends for Drax Power Station in March 2027
- ROCs generated between Apr-26 and Mar-27 will be sold and cash received in 2027
- Working capital inflow of c.£0.5bn
